PROJECT

## Landerwood Crossing New Office Building

Pepper Pike, OH  
\$4.5 M

### PROJECT DESCRIPTION:

A three-story office building

### ADDITIONAL PROJECT FACTS:

- 50,240 sq. ft.
- 180 tons structural steel
- Glass-topped cantilevered canopy

A three-story, steel-framed office building. The exterior walls were finished with various architectural materials, requiring multiple structural attachment details. Features include a glass-topped cantilevered canopy and a steel crown at the roof. These items required the use of bent and built-up structural members. Steel braces provide an economical lateral support system that was designed to fit as unobtrusively as possible into the architectural layout.
